Q: How to setup CORS in jspm I'm trying to use the plugin. I have a webpage in which I include a polyfill (a script with the code to get the native WebView from the device) and an inline javascript script in an html file that uses the cordova-plugin-wkwebview-cordova plugin. When I load the browser webpage in the device, it works fine. When I load the webpage in jspm, it gives this error on the console: Uncaught Error: Unexpected success in OPTIONS How can I configure the jspm to work with the plugin? A: Turns out this was not a jspm problem, but a problem in my cordova project settings (the project created with cordova init). In the project file, the "useJavaScriptForAccessControl" was set to "true". Commenting this line solved the problem. I don't know if it is a default setting (don't ask me the default setting of "useJavaScriptForAccessControl"), but in my case it was set to true and that caused CORS problems.
